

Pilot Program - iDTM-FDI (HART)

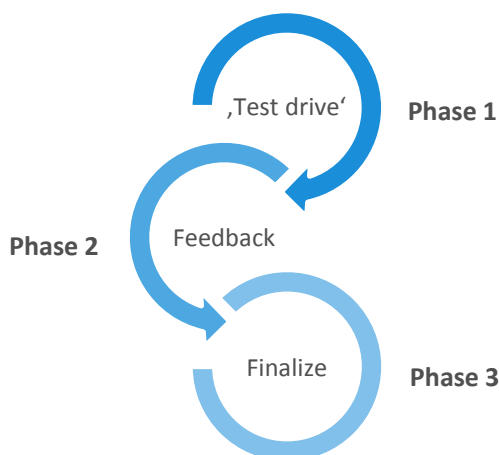

Join the program to be the first to experience iDTM-FDI. Simply Integrated.

iDTM-FDI. Enable your FDT frame now for FDI!

iDTM-FDI (SE = System Edition) is a regular FDT2 DTM but also an FDI Host carrying the FDI Common Host Components for maximum interoperability.

At product level, iDTM-FDI (SE) seamlessly integrates into an existing FDT2 frame application (stand alone or host system integrated). The product allows the import of FDI Device Packages of different device vendors. At pilot level, approx. 15 HART devices are already contained and your "favorite" device will be added!

Be invited to our Pilot Program and sign up for the 'test drive' of iDTM-FDI today.

Your benefits

- Be the first to experience iDTM-FDI
- Free evaluation license of iDTM-FDI HART (SE)
- Free evaluation creation and integration of an FDI Device Package for your preferred device type
- Free support during all Pilot Program phases

How does it work?

- **Preparation:** Just say 'OK' and send us your preferred HART device type information + one version of your FDT2 frame application
- **Phase 1:** Receive iDTM-FDI pilot package and start the 'test drive' iDTM-FDI
- **Phase 2:** Feedback collection and Workshops
- **Phase 3:** Improvement of iDTM-FDI and first product release

Please note: Participants are not obliged to purchase CodeWrights products or services now or in the future.
